Swiftflo Commander

The right information at the right time...

Farms are getting larger and there is less time for individual animal attention. Having access to the right information at the right time is essential. The Swiftflo Commander offers a new level of intelligence for monitoring and controlling each cow's milking, feeding and animal health.

Fingertip operation for ease of use...

The Swiftflo Commander displays important information such as milk yield, milking time, somatic cell count data on each cow and much more. One touch allows you to control feed effortlessly at each milking unit, it can also display if your cow is in heat and draft that cow with a single touch for AI or further inspection.

It also indicates freshly calved cows that enter the parlour and allows colostrum to be diverted. It uses speech technology to inform farmers of information at a time when they can react to it.

What our customers say...

"The Swiftflo Commander is an all in one control that is very easy to use. It is very visual and allows you to see important information at a glance, allowing you to milk your cows properly, efficiently and quickly."

Philip Donohue, Co. Kilkenny.

"I wanted a one man operation so I went with the new Swiftflo Commander. It gives me full control of the milking including drafting, retention and feeding to yield. This is something I will not have to take out as I have the latest technology into the future."

Vincent Gorman, Co. Kildare.

Since the Swiftflo Commander is continuously updated, specifications may change without notice.

Next generation touchpad technology...

Intelligent Washing:

Temperature is displayed continuously during the wash cycle. Wash sequences are synchronised and washing can be activated from any unit.

System Diagnostics:

In-built diagnostics at each milking unit including individual liner alerts.

Touchpad:

The next generation touchpad technology is extremely robust, easy to clean and fully water resistant.

Smart Pulsation:

Advanced pulsator control results in a reduction in energy and longer equipment lifespan.

Seamless integration with other Dairymaster products...

Milk Flow Monitoring:

Continuous milk flow monitoring and automatic cluster removal at the right time for complete milk out.

Cluster Sanitisation:

Disinfection of each cluster after each cow is milked reduces the risk of cross contamination.

Milking Alerts:

A multitude of important information for each individual cow is communicated to the operator at the correct time to take action eg. veterinary and heat alerts.

Diversion:

Milk can be effortlessly diverted to a secondary milk line to reduce labour and milking time.

The possibilities are endless...

The Swiftflo Commander uses the latest smart update technology so future updates can be installed within minutes, making it the obvious choice.
